

GREENCLEAN ULTRASONIC CLEANING

Hermetically sealed modified alcohol cleaning technology that delivers superior performance while protecting your bottom line and the environment.

The optimal cleaning solution balancing technical, economical and environmental needs

Achieve Required Technical Cleanliness – Consistently, Reliably, Cost-Effectively

THE GREENCLEAN ADVANTAGE

Transform your cleaning process with proven technology that delivers:

- Consistent, reliable results
- Lower running costs
- Better cleaning for complex components
- Reduced labor requirements
- Enhanced environmental compliance

AVAILABLE MODELS

Standard 450: 300×450×300mm

Version L: 450×450×300mm

Version H: 300×450×450mm

Version 600: 450×600×450mm

**** Direct CNC pallet processing - no need to transfer tools into cleaning baskets, saving time and reducing handling***

WHY CHOOSE GREENCLEAN?

ENVIRONMENTAL EXCELLENCE

Zero water consumption – Unlike aqueous cleaning systems
Continuous solvent recycling through integrated distillation
Minimal waste generation – Only concentrated oil + solvent residues
Remarkable efficiency: 15 kg solvent cleans 100 kg oil (vs. 100 kg aqueous cleaner needed)
Hermetically sealed system prevents emissions

ECONOMIC ADVANTAGES

Reduced energy consumption – No additional heating or drying required
Minimal solvent replacement thanks to continuous recycling
Lower maintenance costs – Simplified process control
No water costs – No water pretreatment & no wastewater disposal
Smaller footprint – Less floor space required

SUPERIOR PERFORMANCE

Perfect for complex parts - Reaches tiny holes and complex geometries
Integrated vacuum drying – Parts exit completely dry
Universal metal compatibility – No compatibility issues or corrosion risks
Faster cycles – Accelerated evaporation under vacuum conditions
Simplified process control – Easy monitoring and operation

GREENCLEAN VS. AQUEOUS CLEANING

Aspect	Green Clean	Water Base Cleaning
Running Cost	Lower - Less Energy Zero Water Consumption Very low solvent consumption	High volume of Water requiring to be pre-treated High consumption
Waste	Minimal	High costs : Waste water required to be treated
Drying Process	Fast and easy drying	More time and more energy for drying
Easy operation	Low process control of the bath	Constant control of the chemicals bath pH value, concentration
Metal compatibility	Compatible with different metal	Specific per type
