

Edge Prep Innovation

Sharper tools. Smoother operations. Better results.

Edge Prep JET PL-24

Edge preparation & post-treatment for High Performance Cutting Tools

BUILD YOUR HIGH-PERFORMANCE CUTTING EDGE

Redefining Tool Performance

Inconsistent edges, shortened tool life, and manual processes slow you down. The Edge Prep JET PL-24 eliminates these challenges with cutting-edge automation. Imagine a machine that ensures every tool is honed with precision, giving you cleaner cuts, longer-lasting tools, and faster turnaround times. With JET PL-24, your production floor transforms into a hub of efficiency and excellence.

Elevate Every Cut with Precision Engineering

No more guesswork or manual errors. The Edge Prep JET PL-24 automates the micro-honing process with remarkable accuracy. Imagine delivering tools that outperform competitors'—every time. Reduce rework, increase efficiency, and enhance your reputation for quality with a solution built for today's demanding manufacturing needs.

Why The Edge Prep Equipment?

- **Unmatched Precision:** Achieve consistent edge radius on every tool, enhancing cutting accuracy and surface finish.
- **Accelerated Output:** Rapid micro-honing cycles mean you meet tight deadlines without compromising quality.
- **Longer Tool Life:** Uniform edge prep reduces friction, prevents wear, and extends tool lifespan, cutting replacement costs.
- **Seamless Operation:** Easy-to-use controls and automated processes allow any operator to achieve expert-level results with minimal training.
- **Sustainable Solution:** Designed for energy efficiency, the JET PL-24 minimizes waste, aligning with your sustainability goals while maintaining top performance.
- **Hassle-Free Integration:** Its compact footprint and versatile design integrate smoothly into your existing production line, enhancing workflow without disruption.

The future of manufacturing starts here

Stay ahead with tools that not only meet but exceed industry standards. The JET PL-24 ensures precise edges at scale, making it your key to faster production, lower costs, and unparalleled quality.

Built for modern production lines, the JET PL-24 integrates effortlessly into your operations. Its automated processes reduce downtime, while its intuitive interface ensures your team operates at peak efficiency.

We believe in delivering more than just machines—we provide solutions that drive your success. The Edge Prep JET PL-24 is our commitment to helping you achieve operational excellence, no matter the industry.

Pre finishing

Post finishing

Proof is in the performance

The Edge Prep JET PL-24 doesn't just promise results—it delivers them. Our report showcases the machine's capabilities across light prep, heavy prep, honing, and polishing. Each process yields stunning results, from gently refined edges for delicate applications to robust, honed surfaces for heavy-duty cutting.

Tools subjected to heavy prep now show remarkable resilience and precision, while honing ensures a mirror-like finish that reduces friction and extends tool life. The after-treatment images reveal tools with impeccable edge integrity, setting a new standard in cutting performance.

With the JET PL-24, every tool reflects craftsmanship and excellence, giving you confidence in every cut.

Built Your High Performance Cutting Edge

Minimum Operation - High productivity

AUTOMATIC LOADING AND UNLOADING

HIGH PRODUCTIVITY

The JET PL-24 is equipped with a loading and unloading robot that minimizes operation time and production line.

- Up to 720 tools per hour
- 24 loading stations to make turn around faster.

OPTIMIZE YOUR PERFORMANCE

The parameter processes are easy to manage for different tool sizes and geometries. Based on the cutting operations and machining materials, you can optimize your edge radius.

The specific abrasive media, composed of synthetic diamond powder and elastomer, allows you to obtain smooth and nice finishing surfaces.

- Stabilization of the cutting edge
- Increase in tool life
- Preparing the edge for coating deposition
- Minimizing chipping along the cutting edge
- Reduction of friction
- Improvement of wear mechanism, torque and force
- Improvement of the part quality (surface finish, etc.)

PRE TREATMENT

- Deburring
